PEDIATRIC ANESTHESIOLOGY 2009

A meeting co-sponsored by the Society for Pediatric Anesthesia and the American Academy of Pediatrics Section on Anesthesiology and Pain Medicine

Society for Pediatric Anesthesia
education • research • patient care

American Academy of Pediatrics

March 19-22, 2009 at The Hyatt Regency Riverfront

JACKSONVILLE, FLORIDA
This year’s Pediatric Anesthesiology 2009 Meeting will be held in conjunction with the American Academy of Pediatrics Section on Anesthesiology & Pain Medicine, March 19-22, 2009 at the Hyatt Regency Jacksonville, Florida. This beautiful location will allow a combination of the presentation of stimulating educational information and the opportunity to interact with colleagues in a relaxing environment.

As the Program Chair I am excited with how the program has evolved. On behalf of myself, Assistant Program Chairs Mary Ellen McCann (Refresher Courses and Workshops) and Julie Niezgoda (PBLD coordinator) we welcome you for a meeting filled with innovative topics and knowledgeable speakers.

The 2009 meeting has many highlights and offerings including:

- **Thursday** will feature meetings of the Congenital Cardiac Anesthesia Society (CCAS) and the Special Interest Group on Pediatric Pain Management. Registration for both of these meetings is separate but forms are included in this brochure.

- **Friday’s topics** include “Controversies in Pediatric Anesthesia: Where Are We Now with Brain Function Monitoring?” and “Clinical Perspectives in Anesthetic Toxicity.” The next session, “Emerging Technologies and Techniques,” will include new modes of mechanical ventilation for children and uses of cardiac support devices outside the OR. The final session of the morning will be “New Drugs on the Horizon for Pediatric Anesthesia.” Following the morning session will be lunch including the AAP advocacy lecture entitled “Ethical Issues in Pediatric Research on Anesthetic Agents,” presented by Robert “Skip” Nelson, M.D., Ph.D., Pediatric Ethicist, Office of Pediatric Therapeutics, Office of the Commissioner Food and Drug Administration.

- **On Saturday** we will be repeating a morning session called, “The Pediatric Core.” This year the core topic will be devoted to pulmonary diseases. The session is intended to provide an update on what is new and relevant in the management of pulmonary problems.

- **Sunday** will begin with a lecture from Deborah Schwinn, Chair of Anesthesiology at University of Washington, entitled “Perioperative Genomics: Defining the Vulnerable Pediatric Patient.” The lecture is sponsored by SonoSite and will be followed by a review of the past years’ significant articles by the editors from *Pediatric Anesthesia, Anesthesia and Analgesia, and Anesthesiology* and a new session, “What a Reviewer and Editor Each Want to See in a Manuscript.”

In addition, there are many new workshops and some truly excellent refresher courses as well as many of the old favorites such as Jeopardy, Walk around Posters, and the Problem Based Learning Discussions on Saturday and Sunday mornings. As I complete my service as Program Chair, I would like to say thanks to all those that have helped to assemble this meeting especially the Education Committee, the SPA Board Members, and the Staff of the SPA office. Finally a huge thanks to Mary Ellen McCann and Julie Niezgoda – I couldn’t have done this without their help and great ideas!

I hope you enjoy the meeting.
Education Mission Statement

The annual Winter Meeting will focus on topics of interest to those who provide anesthesia, sedation, pain management, and critical care services to infants and children. The overall goals for attendees of the program are to reinforce and enhance their existing fund of knowledge, and to introduce them to new and state-of-the-art issues that affect their practice in order to improve the perioperative/critical care of pediatric patients.

Scope & Types of Activities

The program brings together experts from clinical and basic science disciplines related to pediatric medicine, anesthesia, and surgery.

General topic areas include anatomy, pathophysiology, anesthetic pharmacology, sedation, pain management, patient safety, and child advocacy issues. We will also discuss practice and career management issues. The presentation format is varied, and includes lectures and refresher courses, panel discussions, hands-on workshops and problem-based learning discussions. Additionally, an important part of the program is the presentation of new clinical and basic science research in oral and moderated poster-discussion forums. Significant attendee involvement and feedback are encouraged in all aspects of the program, and will be facilitated by the use of real time computerized audience polling as well as sessions where the audience directly participates in case discussions. Program content is, in fact, the direct result of membership input and extensive audience polling at prior meetings.

Target Audience

This program is intended for anesthesiologists and other practitioners who care for children in their practice of anesthesia and/or critical care. It is also intended for clinical and basic science researchers whose areas of investigation relate to pediatric anesthesia.

Accreditation & Designation

SPA/AAP Program: The Society for Pediatric Anesthesia is accredited by the Accreditation Council for Continuing Medical Education to provide continuing medical education for physicians.

The Society for Pediatric Anesthesia designates this educational activity for a maximum of 19 AMA PRA Category 1 Credit(s)™. Physicians should only claim credit commensurate with the extent of their participation in the activity.

Americans With Disabilities Act

The Society for Pediatric Anesthesia has fully complied with the legal requirements of the ADA and the rules and regulations thereof. If any participant in this educational activity is in need of accommodations, please contact SPA at (804) 282-9780 by March 1, 2009 in order to receive service.

Hotel and City Information

The Hyatt Regency Jacksonville Riverfront is located in the heart of the downtown business, entertainment and sports district, adjacent to the Jacksonville Landing and the Times-Union Center for the Performing Arts, and within minutes of Jacksonville beaches and shopping.

An ideal fit for leisure or business travelers, the hotel offers 966 newly-renovated guestrooms, 110,000 sq. ft. of meeting and event space, five dining and lounge options, a 24-hour fitness center and much more. Experience the best of Jacksonville hotels at Hyatt Regency Jacksonville Riverfront.

Jacksonville bills itself as “America’s Health Center”, and the city is gaining prominence as one of the top health and medical destinations in the country. The area is home to more than 10 medical facilities providing highly-specialized services and technology. With a number of local businesses associated within the medical industry and the region’s first-rate meeting facilities, the city is attracting more medical meetings and conventions for associations and drug manufacturers.

Jacksonville has something to offer everyone. From miles of uncrowded beaches to ecological and nature based excursions, world-class golf courses and unique shopping and dining, you’re sure to find just what you’re looking for in a vacation destination!

THURSDAY, March 19, 2009

6:45-7:30 am  Registration and Continental Breakfast
7:30-7:40 am  Welcome Address
Chandra Ramamoorthy, MBBS, FRCM CCAS President
7:40-7:45 am  Outline of Educational Program
Emad B. Mossad, MD Program Director

7:45-9:15 am  SESSION I: HEART FAILURE/TRANSPLANT
Moderator: Emad B. Mossad, MD
7:45-8:10 am  Cardiomyopathy in Children
Jeffrey Towbin, MD
8:10-8:35 am  MILLION DOLLAR BABY: Ventricular Assist Devices
David Michael McMullan, MD
8:35-9:00 am  Pediatric Heart Transplant Trends and Outcomes
Barry D. Kussman, MBCh, FFA(SA)
9:00-9:15 am  Questions & Answers
9:15-9:30 am  Coffee break

9:30-11:00 am  SESSION II: COAGULATION/BLOOD TRANSFUSION
Moderator: Suanne M. Daves, MD
9:30-9:55 am  Monitoring Coagulation in the Pediatric Cardiac OR/ICU
Nina A. Guzzetta, MD
9:55-10:20 am  Transfusion Dilemmas in Pediatric Cardiac Surgery
Patricia Massicotte, MSc, MD, FRCPC, MHSc
10:20-10:45 am  Life After Aprotinin
Michael Eaton, MD
10:45-11:00 am  Questions & Answers
11:00-11:15 am  Coffee break

11:15 am-12:15 pm  SESSION III: HYBRID ANESTHESIA-MYTH & REALITY
Moderator: James A. DiNardo, MD
Speakers: Helen Holby, MBBS, FRCP(C); Pablo Motta, MD; Peter D. Winch, MD
12:15-12:30 pm  Question & Answers
12:30-1:30 pm  Lunch

1:30-2:15 pm  SESSION IV: WHO SHOULD PROVIDE SEDATION/ANESTHESIA FOR PATIENTS UNDERGOING CARDIAC CATHETERIZATION?
Moderator: Chandra Ramamoorthy, MBBS, FRCM
Speakers: Cardiac — Laura K. Diaz, MD; General — Ian James, MB, ChB, FRCM;
None (or the cardiologist) — Glyn D. Williams, MB, ChB, FRCA
2:15-2:30 pm  Mid-afternoon break
2:30-3:30 pm  SESSION V: ELECTROPHYSIOLOGY UPDATE  
Moderator: Philip D. Arnold, MD

2:30-3:00 pm  Common Acute Postoperative Arrhythmias and their Management 
Naomi Kertez, MD

3:00-3:30 pm  Arrhythmia Workshop (2 rooms) 
Facilitators: Anthony J. Clapcich, MD and Maria M. Zestos, MD

3:30-5:00 pm  SESSION VI: WORKSHOP ON TRANSESOPHAGEAL ECHOCARDIOGRAPHY IN CHILDREN:  
Moderator: Wanda C. Miller-Hance, MD

3:30-3:50 pm  Overview of the Basic TEE Exam in Patients with CHD 
Wanda C. Miller-Hance, MD

3:50-5:00 pm  TEE Workshop (3 stations) 
Facilitators: Greg Stratmann, MD, Wanda C. Miller-Hance, MD, Komal Kamra, MD

CCAS PROGRAM REGISTRATION

If paying by check, please make checks payable to SPA and mail to: 
2209 Dickens Road, Richmond, VA 23230-2005; Phone: (804) 282-9780; Fax: (804) 282-0090

PLEASE PRINT OR TYPE

SEND RESERVATIONS TO:

Hyatt Regency Jacksonville Riverfront
225 East Coastline Drive,
Jacksonville, Florida, USA 32202
Tel: +1 904 588 1234  Fax: +1 904 634 4554
OBJECTIVES

SPA OBJECTIVES

CONTROVERSIES IN PEDIATRIC ANESTHESIA

Brain Function Monitoring in the Pediatric Patient – Where Are We Now?
Learning Objectives:
1. Discuss available means of monitoring for awareness under anesthesia
2. Discuss the current information on pediatric awareness under anesthesia
3. Discuss reliability and limitations of monitoring for awareness in pediatric patients

Clinical perspectives in anesthetic toxicity
Learning Objectives:
Participants should acquire an understanding of the current clinical data relevant to the issue of anesthetic induced neurotoxicity in children.

EMERGING TECHNOLOGIES AND TECHNIQUES FOR PEDIATRIC PATIENTS

New Modes of Mechanical Ventilation for Children
Learning Objectives:
1. Describe the pathophysiologic basis for mechanical ventilator-induced lung injury and describe lung protective ventilatory modes
2. Understand the mechanisms of gas exchange operant during high frequency oscillatory ventilation of the acutely injured lung
3. Review the clinical trials of high frequency ventilatory techniques in the neonatal, pediatric and adult populations
4. Understand the important interactions between high frequency techniques and other modalities utilized in the support of gas exchange, including extracorporeal circulation, inhalational nitric oxide therapy, airway pressure release ventilation, neurally adjusted ventilatory assist and partial liquid ventilation

Uses of Cardiac Support Outside the OR
Learning Objectives:
1. To provide the participants with a description of the current ventricular assist devices (VADs) that can be used for cardiac support in children from infancy through adolescence
2. To discuss the indications for, and the complications and outcomes of VAD therapy in children
3. To review the implications for anesthesiologists if patients on VAD or ECMO support should require non cardiac surgery
4. To provide an overview of the rapidly deployable cardiopulmonary support (CPS) system and its indications, contraindications and outcome for cardiac arrest in children

NEW DRUGS ON THE HORIZON FOR PEDIATRIC ANESTHESIA
Learning Objectives:
Attendees will learn indications and complications of use of the following new drugs on the horizon for pediatric anesthesia which include: IV acetaminophen, Factor rVIIa, sugammadex, and methylaltrexone.

• Intravenous acetaminophen
• Factor rVIIa

AAP Advocacy Lunch – Ethical Issues in Pediatric Research on Anesthetic Agents
Learning Objectives:
1. Discuss the role of animal models in evaluating toxicity
2. Explore the tensions between off-label practice and research in evaluating acceptable risks
3. Consider the impact on appropriate study design of the role of expertise in reducing research risk

Fellows Research Workshop
Learning Objectives:
This workshop is intended to provide fellows with an overview of research methods.

Junior Faculty Workshop – Success in Academics
Learning Objectives:
Junior faculty attending this workshop will be exposed to strategies for building a successful academic career.

Refresher Course – Pediatric Neuroanesthesia Principles and Update
Learning Objectives:
1. Review applied neuroanesthesia principles
2. Update on pediatric neurosurgical anesthetic management
3. Demonstrate the importance of clinical investigation in children and how it influences management

Refresher Course – Management of Preoperative Anxiety in Children
Learning Objectives:
1. Review the underlying psychological issues that affect the manifestations of preoperative anxiety in children
2. To discuss the multiple psychological and clinical outcomes that are associated with anxiety before surgery in children
3. To learn how to manage preoperative anxiety with interventions such as sedative premedication, parental presence, music and hypnosis

Jeopardy
Learning Objectives:
Those attending this session will have the opportunity to review current pediatric anesthesia practice in a game-show format.

WORKSHOPS

1. Epidural Placement in Children, Infants and Neonates - Learning Objectives:
   Attendees of this workshop will gain experience in the use of epidural anesthesia in pediatric patients

2. Peripheral Nerve Block Workshop
   Learning Objectives:
   1. Peripheral nerve blocks including head and neck blocks and upper and lower extremity blocks will be discussed
2. Nerve stimulation and basic ultrasound for nerve blocks will be discussed
3. Placement of peripheral nerve catheters and their management in the postoperative period will be discussed

3. New Devices and New Approaches to the Pediatric Airway-
Learning Objectives:
1. Develop an airway plan for normal and abnormal airway scenarios
2. Understand the use and indications of alternative to direct laryngoscopy for securing the airway
3. Understand the indications, advantages and pitfalls to alternative airway devices in infants and children

4. Dexmedetomidine: Clinical Applications and Limitations
Learning Objectives:
1. Review the pharmacology and physiology of dexmedetomidine
2. Understand the range of clinical applications of dexmedetomidine when used for procedural sedation, in the ICU, in the operating room
3. Understand the clinical limitations and risks with dexmedetomidine usage: Are the risks associated with concomitant medications, patient risk factors, the procedure itself or simply a nature of the drug itself?
4. Review via an interactive discussion between the faculty panel and the participants the shared experience with dexmedetomidine usage

5. Techniques for Difficult Peripheral Access
Learning Objectives:
1. Review the advantages and limitations of near infrared devices for achieving peripheral vascular access
2. Understand the issues in using ultrasound as an adjunct for peripheral IV access
3. Demonstrate the ease of intraosseous access as a rapid source of peripheral access

6. Practical Approaches to Quality Improvement in Anesthesia
Learning Objectives:
1. Discuss incident reporting
2. Discuss use of quality measures
3. Possible applications for Wiki discussions
4. Discuss the Toyota production system

7. Financial Management
Learning Objectives:
This session will provide attendees with insight into various strategies for financial success.

PULMONARY CORE

Cystic fibrosis
Learning Objectives:
1. Infection control issues in the preoperative area, operating room and PACU
2. New concepts in treatment
3. CF in the ICU

Asthma
Learning Objectives:
1. Pathophysiology of asthma
2. Review current management
3. Ventilation strategies in the OR and ICU

Pulmonary Hypertension
Learning Objectives:
1. General diagnosis and treatment
2. Perioperative management
3. General anesthetic effects on therapeutics

AAP Business Meeting/Ask the Experts Panel
Anesthesia for Patients with Pulmonary Disease - A Case Based Discussion
Learning Objectives:
1. List the effects of the most commonly used anesthetics and analgesic agents on airway reactivity and strategies to reduce perioperative respiratory complications in patients with asthma
2. Review the perioperative considerations in caring for a patient with cystic fibrosis
3. Understand the many perioperative factors that can affect pulmonary vascular resistance and what measures can be used to prevent and treat pulmonary hypertensive crisis

Refresher Course – Craniofacial abnormalities: An Overview for the Pediatric Anesthesiologist
Learning Objectives:
1. To understand the etiology and manifestations of craniofacial abnormalities
2. To review the current surgical approaches to craniofacial abnormalities
3. To understand the anesthetic risks and complications associated with the surgical repair of craniofacial abnormalities

Refresher Course – Anesthesia for Pediatric Spine Surgery
Learning Objectives:
1. An overview of the most common pediatric spine surgeries
2. Pre-operative preparation and counseling for pediatric patients
3. Intra-operative anesthesia management and spinal monitoring
4. Post operative care and pain management
5. Recent advances in anesthesia for pediatric spine surgery
6. Conclusions

WORKSHOPS

1. Workshop in Epidural Analgesia for Children
Learning Objectives:
1. Techniques for the safe and effective placement of caudal, lumbar and thoracic epidurals in neonates and small infants
2. A review of the pharmacology of drugs used to provide epidural analgesia including recommendations for infusates and rates that are commonly employed to provide epidural analgesia in all pediatric patients
3. A review of the common problems that occur during epidural analgesia and how these problems can be effectively managed
OBJECTIVES

4. A review of adverse neurological events associated with epidural analgesia in children

2. Advanced Ultrasound-Guided Regional Workshop
Learning Objectives:
1. Upper extremity, lower extremity and truncal blocks
2. Paravertebral, epidural and caudal blocks
3. Techniques to enhance needle visualization with US guidance

3. Using ultrasound guidance to vascular access in neonates and children
Learning Objectives:
1. To learn how to find landmark vascular structures using 2D ultrasound
2. To discuss tips/tricks to facilitate ultrasound-guided line placement
3. To practice these techniques with ultrasound models

4. Simulation in Pediatric Anesthesia
Learning Objectives:
1. Review of medical simulation and it uses for education and training
2. Gain an understanding of the elements of performance that can be taught and assessed using high-fidelity simulation.
3. Experience a simulation scenario, gaining an understanding of the elements of team performance that could impact patient care

5. Teaching the Advanced ACGME Competencies
Learning Objectives:
1. Describe the ACGME competencies including professionalism, interpersonal and communication skills, practice based learning and improvement and system based practice
2. Discuss the use psychometric inventories targeted around specific teaching models to help better teach the advanced competencies
3. Appreciate and describe the importance of multiple learning modalities including reflection and community-building activities (use of inventories, small and large group interactive techniques) to teach the advanced competencies

6. Integrating Acupuncture in Pediatric Peri-operative Care and Pain Medicine
Learning Objectives:
1. Understand the current practice of acupuncture medicine
2. Learn the history and theory of acupuncture
3. Understand scientific evidence of acupuncture practice
4. Evaluate acupuncture meridian systems and micro-system paradigms
5. Incorporate acupuncture in pediatric anesthesia, and pain practice
6. Participate hands-on demonstration of acupuncture and related techniques

SonoSite Lecture: Perioperative Genomics: Defining the Vulnerable Pediatric Patient
Learning Objectives:
1. List the difference between genetic & genomic medicine
2. Describe how genetic variation potentially affects day-to-day care of perioperative patients
3. List drugs and medical conditions where genetic variability plays an important role in end organ injury

2008'S BEST EDITORS PICK

Learning Objectives:
This session, provided by the editors from the most frequently cited journals in the field, is intended to review the previous years best papers and provide the audience with an editors perspective on manuscript selection

1. What a Reviewer Wants to See in a Manuscript
2. What an Editor Wants to See in a Manuscript
3. Anesthesia and Analgesia
4. Anesthesiology
5. Pediatric Anesthesia

CCAS OBJECTIVES

SESSION I: HEART FAILURE/TRANSPLANT

Cardiomyopathy in Children
Learning Objectives: Following this session, the participant will understand the prevalence, etiology, pathophysiology and genetics of DCM and Restrictive cardiomyopathy in children. He/she will understand the cellular mechanisms of heart failure in children and be familiar with recent management strategies and with the outcome of cardiomyopathy in children.

MILLION DOLLAR BABY: Ventricular Assist Devices
Learning Objectives: At the conclusion of this session the participant will be familiar with the decision process and indications for placement of ventricular assist devices in children. He/she will be familiar with available and forthcoming assist device technology, with the unique postoperative management issues associated with this technology, and with current data regarding outcome.

Pediatric Heart Transplant Trends and Outcomes
Learning Objectives: Following this session the participant will understand the indications for heart transplantation in children. He/she will be familiar with the demographic composition of the pediatric heart transplant population and with outcomes of heart transplantation in children. He/she will be able to use this knowledge to refine their individual approach to the management of children following heart transplant for non-cardiac and catheterization procedures.

SESSION II: COAGULATION/BLOOD TRANSFUSION

Monitoring Coagulation in the Pediatric Cardiac OR/ICU
Learning Objectives: Following this session the participant will be familiar with the hemostatic perturbations that commonly occur following pediatric cardiac surgery. He/she will understand the use of currently available POC modalities for assessing coagulation (including rapid TEG, Sonoclot, Hepcon systems) and will understand the impact of these coagulation studies on transfusion practices in children.
OBJECTIVES

Transfusion Dilemmas in Pediatric Cardiac Surgery
Learning Objectives: At the conclusion of this session the participant will understand the impact of transfusion requirements in children on blood bank resources. He/she will be familiar with current controversies (age and type of blood, irradiation, CMV status, leukocyte reduction) surrounding blood transfusion in pediatric cardiac surgery.

Life in the Post-Aprotinin Era
Learning Objectives: Following this session the participant will be familiar with the pharmacokinetics and efficiency of the lysine analogs as compared to the serine protease inhibitor aprotinin in children. He/she will understand the current status of aprotinin use in pediatric cardiac surgery and will be familiar with the use of the adjuvant hemostatic agents aprotinin DDAVP and rFVIIa.

SESSION III: HYBRID ANESTHESIA-MYTH & REALITY
Learning Objectives: Following this session the participant will understand how 3 different centers utilize the Hybrid approach to HLHS. Specifically, he/she will be familiar with how the indications, patient selection criteria, interventional strategy, and intraoperative/postoperative management differs at these 3 centers. He/she will be able to use this knowledge to refine their individual approach to these issues in their practice.

SESSION IV: WHO SHOULD PROVIDE SEDATION/ANESTHESIA FOR PATIENTS UNDERGOING CARDIAC CATHETERIZATION?
Learning Objectives: Following this session the participant will be familiar with the growing need for anesthetic care in the pediatric cardiac catheterization laboratory and the impact of this need on manpower and training considerations in cardiac anesthesia. In addition, the participant will be familiar with the evidence that frames the debate on who is best qualified to provide sedation/anesthesia to pediatric cardiac catheterization patients.

SESSION V: ELECTROPHYSIOLOGY UPDATE
Common Acute Postoperative Arrhythmias and their Management
Learning Objectives: Following this lecture the participant will be familiar with the most common arrhythmias in the immediate postoperative period in children following cardiac surgery. He/she will be familiar with current treatment modalities (including PALS recommendations) for treating these arrhythmias.

Arrhythmia Workshop
Learning Objectives: At the conclusion of the workshop the participant will be capable of demonstrating competency in the diagnosis and treatment of common arrhythmias in children.

SESSION VI: WORKSHOP ON TRANSEOPHAGEAL ECHOCARDIOGRAPHY IN CHILDREN
Overview of the Basic TEE Exam in Patients with CHD
Learning Objectives: At the conclusion of this workshop the participant will be able to describe a basic TEE exam in children with congenital heart disease and will understand the essential components of a comprehensive pediatric perioperative TEE exam.

TEE Workshop
Learning Objectives: Following this 3-station workshop the participant will be familiar with the essential preoperative and postoperative TEE findings in patients with:
1. Tetralogy of Fallot
2. ASD/VSD/Cavo
3. Single ventricle repair
